**EXTENT** 38 pages

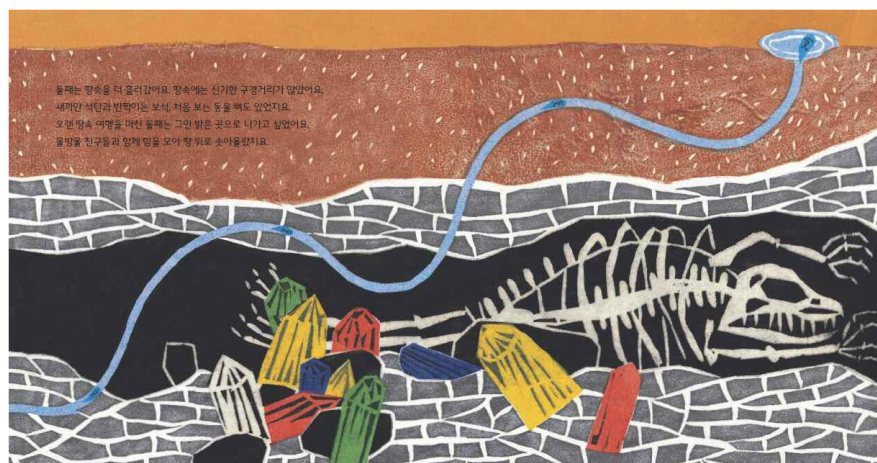

**CATEGORY** Picture Book

**RIGHTS** WORLD

All living things need water to live. And water exists in several different forms such as common liquid water, frozen water of ice, snow, glacier, floating vapor and cloud.

In the beginning of earth, moisture in the atmosphere condenses to clouds.

There are water drop brothers, begin long journey around world from sky to underground.

The firstborn goes to sun and becomes cloud to look around world and turns to snow crystal. And second water drop flows under the ground and sees fossils and minerals. The last water drop is absorbed into roots and raises it. A cow eats the plant and the water drop becomes milk inside of organ. When a boy drinks it, the milk turns into nutrition and excreted from the body.

All of them meet again in the sea, and starts new journey!

In this book children will learn all about the amazing hydrologic cycle that can be found around the globe.

**Let your kids enjoy water drop brother's journey with all living things and learn about principle of ecological balance, the circulation!**
